General questions

1. What relevant programming languages or frameworks are you comfortable with? State your credentials and any experience in development. Internships, passion projects, open source collaborations..we'd love to hear it all!

A. Only C language, it's a course taught in trem 2. Though I am putting my efforts to learn JS via youtube, I'm not familiar with it yet. I have zero experience in development, projects, etc.

2. What improvements can you suggest in the current websites made by the institute WebOps team? Refer these links: <https://students.iitm.ac.in/freshers-website/>, <https://students.iitm.ac.in/sports/>, <https://students.iitm.ac.in/iitmhelps/>

A. In the freshers website, a menu item containing announcements and details about all the recruitments for club co-ordinators and other kinds of recruitments would be nice. This way every all the information regarding recruitments will be at one place which makes things a lot easy.

In the sports website. It might be nice if its possible to view the details of previous inter hostel and inter iit winners, runners and a few details on those aspects.

3. Why are you applying for this position and what qualities make you the right person for this?

A. I would like to apply for this position, because it was said that we will be taught about web development in detail if I qualify, and I was searching for opportunities like these as I'm very interested in web development. Also contributing to to insti webpage feels very exciting.

4. How much time can you devote to working in the WebOps team?

A. I can devote about 1 to 2 hrs per day after the semester starts, I think I can manage more than 2hrs too. If it's a holiday I'm willing to spend even more time.

5. How would you rate your willingness to learn new stuff? What methods do you use to learn something new?

A. I will give myself a 9 for the willingness to learn new stuff. I try reading books , mostly pdfs, about the topics I want to learn. I rely on youtube too for a lot many things. Though I prefer reading books from standard authors, very often I switch to youtube if can't interpret the books.

6. Feel free to describe any projects that you've worked on previously or are working on currently. You can include details about the design/architectural decisions you had to make and why you made them, any challenges you faced and how you overcame them. Abandoned projects are fine too (maybe you can write about the lessons you learnt from them).

A. I didn't work on any projects before.
